

A Game of Friends

Justin Sanny | B.J. Johnson | Loyola Marymount University

Project Description

A Game of Friends is a 2-player game, developed for Android devices. It has players answers a series of humorous questions. These questions are made to create a comfortable environment where each player can learn more about the other.

Functionality

- Answer questions to figure out intimacy of relationship
- Play with friends and family for amusement
- Receive score based on matching answers

Future Plans

- Add a database for questions
- Add IOS functionality
- Create a web-based game
- Host on a server

Justification

- Learn to develop for Android applications
- Gain experience with creating and following a self-made development schedule
- Create an app-inspired version of the “Newly Wed” Game.

Technologies

Copyright

- I do not reserve the rights to Game of Thrones, Friends, or any other affiliate company/product.
